1. Applicant's election of Group I in Paper No. 6 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 4, 5 are rejected under 35 U.S.C. 102(b) as being anticipated by either Matsumoto et al.-US 4,251,603 (Matsumoto) or JP-10289713 ('713).

Reference is made to column 3, lines 58-66 of Matsumoto along with column 4, line 65 through column 5, line 35 and column 7, lines 21-31. It is noted that in claims 2 and 5, applicant has claimed process steps, however applicant's claims are product claims. Because Matsumoto teaches the claimed product, it is irrelevant how the product is made so applicant's claims are anticipated by the patent to Matsumoto.

See the English language abstract in '713. It is inherent in '713 that the inner portion of the electrode in '713 has a greater porosity than outer surface portions because the electrode is treated with a two step rolling process as applicant has claimed.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Yoshii et al. show a battery having an electrode with one layer having a different porosity than another layer of the electrode.
